SUMMARY

The study shows the results of public accommodation establishments (especially in Heves County) in the period of 2000-2009 in the context of basic touristic statistical indicators like the number of public accommodation establishments, capacity, arrivals, bednights, average length of stay, revenue (structure of revenue). According the study, we can conclude that on the basis of the capacity, number of guests and number of bednights of public accommodation establishments, Heves County (as compared to other counties of the region) played a pivotal role in the tourism of Northern Hungary in the studied period.

Keywords: touristic results, public accommodation establishments, Northern Hungarian Region, Heves county

INTRODUCTION – THE ECONOMIC ROLE OF TOURISM

The tourism sector has important economic and social embedding, the sector has complex effects on the national economy’s development. It plays partial role in the shaping of market situation of several other national economy sectors (like transportation, telecommunication, trade, financial services, health care, cultural and sport services), while the demand of tourism sector is just indirect in case of the products or services of other sectors (in agriculture, industry, building industry, environment protection). According to tourism organizations and experts, in the third millennium’s first decade the health tourism travels (within the tourism travels) shows the most dynamic development.

The economic impacts of tourism can be analyzed from the sending- and the hosting area’s correlation. In both cases it is an important condition to have regular and reliable data (statistical database and standard interviews) from the field of tourism, for the researchers to define the real impacts of tourism.

The following factors play an important role in the variations of economic impacts of tourism:
- Economic level of the sending- and hosting area
- Life cycle of the touristic destination
- Touristic capacity of the hosting area
- Quantity and structure of tourist’s spending
- Seasonality of tourism
- The use of revenues from tourism (tourism taxes)
- Legal and economic regulations of local tourism (Mundruczó and Stone, 1996)

I have divided the public accommodation establishments into two different types under my hypotheses and the analysis, such as „hotel type public accommodation establishments” and „other type of public accommodation establishments”. The different levelled hotels come in the first group (from 1 to 5 star hotels), including spa, wellness and apartment hotels. To the second group „other” accommodation types were rated like: boarding houses, tourist hostels, youth hostels, bungalows and camp sites.

TOURISTIC ENDOWMENTS AND ATTRACTION FACTORS OF THE REGION

The touristic endowments of the Northern Hungarian region can be called complex and multi-elemented. This fact is the determinative strength of the region. The most of the attractions has been appreciated during the past some years, appeared expanding contented touristic products, and the awareness of the attractions has been grown. Beside the three World Heritage Attractions (Hollókő and the Aggtelek stalactite cave, the Tokaj-hegyalja historical wine growing area, and Ipolytarnóc prehistorical excavation site), appears four wine growing regions (Mátrai, Bükkaljai, Egri, Tokaj-hegyaljai). Can be mentioned also the historical towns, and other heritages (fortresses, castles), sacral and historical memorials, national parks, and hills (Mátra, Bükk, Zemplén), thermal baths, and spas, climatic health resorts, newly created theme routes, year by year recurring international and national events. Every attraction contributes to the region’s touristic potential in national and in international context too. At the latest development strategic document 4670 pieces of attraction factors were identified in the attraction factor inventory. (RMC, 2006) Table 1.

Can be found some attraction elements, those are „potential” attractions: exists, holds values, but not used yet, as touristic attractions. Most of them received „local attractions”, or „subregional attractions” mark. The situation is closely the same at the theme routes, these exists only as „marketing elements”, the real product development work still waits, but in long run this would be profitable. Finally can be mentioned, that some attraction elements are missing from the list, those can be important in the future, such as extreme sport sites, and monuments used for tourism purposes. (RMC,

Northern Hungary is an attractive destination for those tourists who during their stay would like to enjoy physical and mental relaxation. The region's climatic health resorts, caves, carbon dioxide dry bath (mofetta) are unique in the country, as well as the spa and thermal baths rightly enthralls the followers of wellness lifestyle. These wide range of elements means the main strengths of the region. The supply is enriched by the local existing unique elements, like the Turkish Bath of Eger, the Cave bath at Miskolctapolca, the mofetta at Mátraderécse, the thermal spa at Egerszalók, having special natural surroundings. The touristic supply is further strengthened by the complementary services, like wine-gastronomic, cultural, etc. services, those cannot be found in such a complexity in other parts of the country. The healing effects of thermal waters in the region have long been known, the bathing culture is based on century long traditions, but in the XX. century, during the hydro-carbon researches, new thermal water bases have been revealed. There is strong diversity among the region's thermal water springs, having different mineral combinations, characteristics, so they are able to cure wide range of different diseases. The situation of the region's most important medical and thermal baths has changed a lot in the past few years, the baths renewed, their services expanded. (RMC, 2006)

THE RESULTS OF PUBLIC ACCOMMODATION ESTABLISHMENTS IN THE REGION IN THE MIRROR OF THE NUMBERS

The quantity and quality of accommodations play determining roles in how effectively the basic supply elements of tourism can be sold. There are several high levelled public accommodation establishments in Heves county, those added to the basic services, also providing wellness services.

In the following I will define (according to specific rules of law) the terminology of public accommodation establishment.

Public accommodation establishment: an establishment built or converted and used for that (accommodation) purpose, if the number of used rooms are over five, and the beds over ten (in case of camp sites, the number of used place units are over five) the establishment of business, on year-round or seasonal basis, continuous daily operations without interruption, providing accommodation and services. The accommodation capacity of less than that indicated in the business of tourism activity must be carried out only in accordance with Government Edict No. 110/1997. (Jun 25th) (KSH, 2010)

We can divided the public accommodation establishments into two different types, such as „hotel type public accommodation establishments” and „other type of public accommodation establishments”. The different levelled hotels come in the first group (from 1 to 5 star hotels), including spa, wellness and apartment hotels. To the second group „other” accommodation types were rated like: boarding houses, tourist hostels, youth hostels, bungalows and camp sites.

Accommodation statistics in the region

The accommodation supply (capacity – bed place for tourists) of the counties in the region assigns the region’s potential touristic arrivals. The figure below represents public accommodation establishment capacity of the counties in the region.
In Figure 1 it can be seen that the capacity of Borsod-Abaúj-Zemplén county is a bit higher than the capacity of Heves county, but the difference is not so big, as the difference of the spread of the county. At 2009 can be see, that the number of the capacity in Borsod-Abaúj-Zemplén county falled down, maybe as the impact of the economic crisis. This fall tendency cannot be observe dramatically at the case of Heves, or Nógrád counties.

Across the public accommodation establishment business, analysing the indicators of local tourism, the capacity (number of the bed place for tourists), the tourist arrivals, and the number of tourist night (nights spend by the guests) are significant data. From those data other indicators can be calculated, like room capacity utilization, bed place capacity utilization, revenue capacity utilization, average length of stay, average revenue per guest, etc. (Fazekas et al., 2005)

The average stay indicator can be calculated easily, we simply have to divide the number of total tourist nights by the number of total tourist arrivals. The average length of stay is one of the indicator of success of the destination, which shows how long the guests would stay at the destination (and so, how long they will spend money there). At Figure 4 it can be seen that the average length of stay at the region’s public accommodation establishments changes between 2.2 to 2.4 bednights, which is true for the average of the region, too. According the datas, there

to Figure 2 and 3 we can find out that although Borsod-Abaúj-Zemplén county has a bit better position than Heves County in bed place capacity, but in the number of tourist arrivals and in the number of bednights, their performance were nearly the same during the observed period. At figure 3 (unfortunately I found datas for 2009 and 2010 only about the whole region) in 2009 can see a dramatically throw-back in the number of bednights, but in 2010 again can be see a little growing tendency, that can be optimistic, out of the crisis.
wasn’t setback in the crisis period, the average length of stay was successfully hold.

The types of public accommodation establishments in Heves County

*Figure 5* shows below the number of units of different public accommodation establishments and how it changed between the period of 2000 and 2008. It can be mentioned that in the unit number of the hotel type accommodations there were not any significant changes. In 2004 there was a little increase, but to 2007 it fell back to the level of 2004. Dramatic decrease happened in case of the boarding houses from 2003, and they could not reach that level during the analysed period again.

*Figure 5: Number of the different Public Accommodation Establishments in Heves County (in units)*

The structure of the revenues of public accommodation establishments in Heves County

The number of public accommodation establishment units influences the created revenues in the county. *Figure 6* represents the revenues of the county’s public accommodation establishment, and also shows the structure of revenue compositions. According to *Figure 6* it can be mentioned that little more than 50% of the revenues came from the room prices, an important amount came from the catering services, but the „other” revenue division takes half of the revenues average from catering.

*Figure 6: Structure of revenues at Public accommodation Establishments in Heves County (in thousand HUF)*

**CONCLUSION**

According to the above demonstrated results, we can conclude that, despite its smaller area, and lesser touristic attractions, on the basis of the capacity, number of guests and number of bednights of public accommodation establishments, Heves County (as compared to other counties of the region) played a pivotal role in the tourism of Northern Hungary in the studied period.
