**Key words:** geriatric, primary healthcare intervention, EUGMS, Czech Republic

### ***Objective***

This research is aiming to evaluate the care interventions and approaches for the ageing population in different countries and their perspective of geriatric care. Quality assurance and workforce development the monitoring supervision and evaluation of care progression is very demanding for the sustainable delivery of care and frequent trainings and education of healthcare professionals develop quality geriatric care.

### ***Method***

The review study conducted in this research paper adhered to the PRISMA (Preferred Reporting Items for the Systematic Reviews and Meta-Analyses) guidelines.

### ***Results***

The global geriatric care strategy and plan of action on ageing and health, which provide a clear mandate for action across health and social care sectors, where a different set of outcome indicators is needed – indicators that reflect intrinsic capacity, functional ability, quality of life

and the attainment of goals defined by the older person. There are three parties involved in care for older people: a) the persons in need of care; b) their families and c) paid care workers (in the formal or informal economy). These three groups, of whom the majority are women, live the consequences of changing public policies.

### ***Conclusion***

Czech Republic is avoiding to provide such health care services due to many reasons, mainly lack of funds, services providers, and trained staff to carry such task of dealing health care out of hospital, due to these some reasons Czech Republic is still in doubts to expanded access to medical services, and to focus on preventative care, and a team-based approach to care that involves various healthcare professionals at home.
